Submit your research challenge!

Theory & Methods Challenge Fortnights (TMCFs)

We are seeking research proposals from across the Turing research community to establish our new 'TMCFs in Data Science and Artificial Intelligence' event series.

TMCFs will bring together experts from the Turing and other institutions to join forces for a multi-day research event on a specific theoretical or methodological challenge.

These challenges can be drawn from any discipline in the remit of data science and AI.

We expect that the theoretical and methodological contributions stemming from the challenge to have the potential to impact data science and AI, or a related discipline, in a fundamental way.

Applications
